

LABORATORY NO.: 1379886

PROFILE NO.: 1

SAMPLE TYPE: SCALP

PATIENT:

AGE: 5

SEX: M

METABOLIC TYPE: SLOW 4

REQUESTED BY:

ACCOUNT NO.:

DATE: 7/14/2017

NUTRITIONAL ELEMENTS

TOXIC ELEMENTS

ADDITIONAL ELEMENTS

"<<": Below Calibration Limit; Value Given Is Calibration Limit

"QNS": Sample Size Was Inadequate For Analysis.

"N/A": Currently Not Available

Ideal Levels And Interpretation Have Been Based On Hair Samples Obtained From The Mid-Parietal To The Occipital Region Of The Scalp.

Laboratory Analysis Provided by Trace Elements, Inc. an H. H. S. Licensed Clinical Laboratory. No. 45 D0481787

7/14/2017

CURRENT TEST RESULTS

SIGNIFICANT RATIOS

TOXIC RATIOS

ADDITIONAL RATIOS

RATIO	CALCULATED VALUE		EXPECTED
	Current	Previous	
Ca/Sr	252.17		131/1
Cr/V	8.00		13/1
Cu/Mo	55.56		625/1
Fe/Co	1000.00		440/1
K/Co	161000.00		2000/1
K/Li	26833.33		2500/1
Mg/B	2.69		40/1
S/Cu	4913.00		1138/1
Se/Tl	260.00		37/1
Se/Sn	4.33		0.67/1
Zn/Sn	300.00		167/1

LEVELS

All mineral levels are reported in milligrams percent (milligrams per one-hundred grams of hair). One milligram percent (mg%) is equal to ten parts per million (ppm).

NUTRITIONAL ELEMENTS

Extensively studied, the nutrient elements have been well defined and are considered essential for many biological functions in the human body. They play key roles in such metabolic processes as muscular activity, endocrine function, reproduction, skeletal integrity and overall development.

TOXIC ELEMENTS

The toxic elements or "heavy metals" are well-known for their interference upon normal biochemical function. They are commonly found in the environment and therefore are present to some degree, in all biological systems. However, these metals clearly pose a concern for toxicity when accumulation occurs to excess.

ADDITIONAL ELEMENTS

These elements are considered as possibly essential by the human body. Additional studies are being conducted to better define their requirements and amounts needed.

RATIOS

A calculated comparison of two elements to each other is called a ratio. To calculate a ratio value, the first mineral level is divided by the second mineral level.

EXAMPLE: A sodium (Na) test level of 24 mg% divided by a potassium (K) level of 10 mg% equals a Na/K ratio of 2.4 to 1.

SIGNIFICANT RATIOS

If the synergistic relationship (or ratio) between certain minerals in the body is disturbed, studies show that normal biological functions and metabolic activity can be adversely affected. Even at extremely low concentrations, the synergistic and/or antagonistic relationships between minerals still exist, which can indirectly affect metabolism.

TOXIC RATIOS

It is important to note that individuals with elevated toxic levels may not always exhibit clinical symptoms associated with those particular toxic minerals. However, research has shown that toxic minerals can also produce an antagonistic effect on various essential minerals eventually leading to disturbances in their metabolic utilization.

ADDITIONAL RATIOS

These ratios are being reported solely for the purpose of gathering research data. This information will then be used to help the attending health-care professional in evaluating their impact upon health.

REFERENCE RANGES

Generally, reference ranges should be considered as guidelines for comparison with the reported test values. These reference ranges have been statistically established from studying an international population of "healthy" individuals.

Important Note: The reference ranges should not be considered as absolute limits for determining deficiency, toxicity or acceptance.

Health history

1. **His current symptoms:** Hyperactivity, stubbornness, Speech delay, seeking.
2. **Dental history:** Nothing.
3. **Dental work:** Nothing.
4. **Mother dentistry:** the mother is a dentist, she does not work with amalgams, and she has done only dental care. However, the father has made amalgams but he has removed it.
5. **Vaccinations History:** He has done all vaccinations until 2 years.
6. **Supplementation:** with HTMA Practitioner

Magnesium Malate
Calcium Hydroxyapatite
Boron 3mg
Vitamin D3 400 iu
Dry Vitamin A 5000iu
Taurine 500mg
Zinc Picolinate
Manganese 10mg
Copper Sebacate
Selenium 100mcg
Choline & Inositol 500mg
Chelated Molybdenum 150mcg

7. **Location:** Sétif (Algeria).
